

## Martin F. Woodard

NorthWest Research Associates  
Boulder Office  
3380 Mitchell Lane, Boulder, CO 80301  
Tel: (303) 415-9701  
Internet: [mfw@cora.nwra.com](mailto:mfw@cora.nwra.com)

### Professional Preparation

1984: Ph.D., Physics, University of California, San Diego  
1981: M.S., Physics, University of California, San Diego  
1976: A.B., Physics, University of California, Berkeley

### Appointments

2003 - : Senior Research Scientist, NorthWest Research Associates  
1997 - 2002: Associate Research Professor, New Jersey Institute of Technology  
1996 - 1997: Senior Research Scientist, Windrush Research Corporation  
1995 - 1996: Research Scientist, Bartol Research Institute, University of Delaware  
1993 - 1994: Research Associate, The Pennsylvania State University  
1992 - 1993: Lecturer in Physics, California Institute of Technology  
1990 - 1993: Senior Research Fellow, California Institute of Technology

### Selected Publications

- Woodard, M. F.: 2021, "Towards realistic estimates of solar global oscillation mode-coupling measurement noise", *Mon. Not. R. astr. Soc.* **505**, 3433.
- Hanasoge, S. M., Woodard, M., Antia, H. M., Gizon, L. and Sreenivasan, K. R.: 2017, "Sensitivity of Helioseismic Measurements of Normal-mode Coupling to Flows and Sound-speed Perturbations", *Mon. Not. R. astr. Soc.* **470**, 1404.
- Woodard, M. F.: 2016, "Evidence for Large-Scale Subsurface Convection in the Sun", *Mon. Not. R. astr. Soc.* **460**, 3292.
- Woodard, M.: 2014, "Detectability of Large-Scale Solar Subsurface Flows", *Solar Phys.* **289**, 1085.

- Woodard, M. F., Kuhn, J. R., Murray, N., and Libbrecht, K. G.: 1991, "Short-Term Changes in Solar Oscillation Frequencies and Solar Activity", *Ap. J. Letters* **373**, L81.
- Woodard, M. F. and Marti, K.: 1985, "Clusters and Cycles in the Cosmic Ray Age Distributions of Meteorites", *International Cosmic Ray conference proceedings, La Jolla* **5**, 402.

### **Relevant Scientific, Technical, and Management Performance**

Woodard has been PI on a number of NASA and NSF projects related to the proposed work. The goal of these projects was to develop helioseismic models of solar mass flows and apply them to *SOHO*/MDI and GONG solar oscillation data sets to study subsurface flows on scales ranging from supergranulation to meridional circulation. Woodard was recently PI on a NASA project closely related to the proposed work. The goal of the project was to investigate turbulent convection on the largest angular scales using *SOHO*/MDI solar oscillation data.
